

In the Claims

1. (Currently Amended) A computer implemented method comprising:
receiving, via a computing device having [[by]] at least one first information handling system, ~~comprising a computing device,~~ of a user, an excerpt of information associated with the user;
in response to receiving the excerpt, automatically translating, via the computing device, the excerpt into an XML format to be compatible, without further translation, for operation with at least one second information handling system of the user;
saving, via the computing device, the translated excerpt in a first personal folder associated with a user of the first information handling system, the translated excerpt including a user-specified item of music; and
synchronizing, via the computing device, the translated excerpt with the second information handling system by communicating with a third information handling system associated with a server, a version of the translated excerpt saved in a second personal folder associated with the user of the second information handling system.
2. (Previously Presented) The method of claim 1, wherein the excerpt has a non-XML format, and wherein automatically translating comprises:
in response to receiving the excerpt, automatically translating the excerpt from the non-XML format into the XML format to be compatible for operation with the second information handling system.
3. (Previously Presented) The method of claim 1, wherein the excerpt has an alternate XML format, and wherein automatically translating comprises:
in response to receiving the excerpt, automatically translating the excerpt from the alternate XML format into a generic XML format to be compatible for operation with the second information handling system.
4. (Original) The method of claim 1, and comprising:
saving the XML-formatted excerpt in a personal folder of the user.

5. (Original) The method of claim 1, wherein the XML-formatted excerpt is a user-specified website.
6. (Original) The method of claim 1, wherein the XML-formatted excerpt is a user-specified search query.
7. (Original) The method of claim 1, wherein the XML-formatted information is a user-specified search result.
8. (Canceled)
9. (Currently Amended) A computer system comprising:
a computing device having at least one first information handling system, ~~comprising a computing device,~~ of a user for:
 - receiving an excerpt of information associated with the user;
 - in response to receiving the excerpt, automatically translating the excerpt into an XML format to be compatible, without further translation, for operation with at least one second information handling system of the user;
 - saving the translated excerpt in a first personal folder associated with a user of the first information handling system, the translated excerpt including a user-specified item of music; and
 - synchronizing the translated excerpt with the second information handling system by communicating with a third information handling system associated with a server, a version of the translated excerpt saved in a second personal folder associated with the user of the second information handling system.
10. (Previously Presented) The system of claim 9, wherein the excerpt has a non-XML format, and wherein the first information handling system is for:
 - in response to receiving the excerpt, automatically translating the excerpt from the non-XML format into the XML format to be compatible for operation with the second information handling system.

11. (Previously Presented) The system of claim 9, wherein the excerpt has an alternate XML format, and wherein the first information handling system is for:
in response to receiving the excerpt, automatically translating the excerpt from the
alternate XML format into a generic XML format to be compatible for operation
with the second information handling system.
12. (Original) The system of claim 9, and wherein the first information handling system is
for:
saving the XML-formatted excerpt in a personal folder of the user.
13. (Original) The system of claim 9, wherein the XML-formatted excerpt is a user-specified
website.
14. (Original) The system of claim 9, wherein the XML-formatted excerpt is a user-specified
search query.
15. (Original) The system of claim 9, wherein the XML-formatted information is a user-
specified search result.
16. (Canceled)
17. (Currently Amended) A computer program product stored on a tangible computer
readable medium, comprising:
at least one computer program processable by at least one first information handling
system, comprising a computing device, of a user for causing the first information
handling system to:
receive an excerpt of information associated with the user;
in response to receipt of the excerpt, automatically translate the excerpt into an XML
format to be compatible, without further translation, for operation with at least
one second information handling system of the user;

save the translated excerpt in a first personal folder associated with a user of the first information handling system, the translated excerpt including a user-specified item of music; and
synchronize the translated excerpt with the second information handling system by communicating with a third information handling system associated with a server, a version of the translated excerpt saved in a second personal folder associated with the user of the second information handling system; and
apparatus from which the computer program is accessible by the first information handling system.

18. (Previously Presented) The computer program product of claim 17, wherein the excerpt has a non-XML format, and wherein the computer program is processable by the first information handling system for causing the first information handling system to:
in response to receipt of the excerpt, automatically translate the excerpt from the non-XML format into the XML format to be compatible for operation with the second information handling system.
19. (Previously Presented) The computer product of claim 17, wherein the excerpt has an alternate XML format, and wherein the computer program is processable by the first information handling system for causing the first information handling system to:
in response to receipt of the excerpt, automatically translate the excerpt from the alternate XML format into a generic XML format to be compatible for operation with the second information handling system.
20. (Original) The computer program product claim of 17, wherein the computer program is processable by the first information handling system for causing the first information handling system to:
save the XML-formatted excerpt in a personal folder of the user.
21. (Original) The computer program product of claim 17, wherein the XML-formatted excerpt is a user-specified website.

22. (Original) The computer program product of claim 17, wherein the XML-formatted excerpt is a user-specified search query.
23. (Original) The computer program product of claim 17, wherein the XML-formatted information is a user-specified search result.
24. (Canceled)
